

NexaTech Solutions - IT Security Policy

Policy ID: IT-SEC-012

This policy establishes security requirements for protecting company systems, accounts, devices, and confidential information.

1. Password Requirements

Employees must use strong passwords containing a combination of uppercase letters, lowercase letters, numbers, and special characters. Passwords must not be reused across company systems.

2. Multi-Factor Authentication

Multi-factor authentication is required for all critical company systems and externally accessible business applications.

3. Company Devices

Employees must use company-approved security software and keep operating systems and applications updated. Lost or stolen company devices must be reported immediately to the IT security team.

4. Data Protection

Confidential company information must only be stored using approved company systems. Employees must not upload confidential information to unauthorized external services.

5. Security Incidents

Suspected phishing attacks, unauthorized access, malware infections, or accidental data disclosure must be reported to the IT security team immediately.
